Branch Creek 10-0-2 w/Pre-Emergent

Take Advantage of our Game Changing Fertilizer with Crabgrass Pre-Emergent.

Branch Creek 10-0-2 w/Pre-Emergent is a non-manure based, biosolid-free fertilizer that contains no harsh ingredients. With an effective formula and no restrictions on reentry time after application, Branch Creek 10-0-2 w/Pre-Emergent is revolutionizing the way Turf Managers fertilize and control crabgrass in cool and warm season grasses.

No Harsh Ingredients - No Biosolids - No Manure - No Odor

10-0-2 w/Pre-Emergent provides sports turf managers with significant benefits, including:

 Plant-Based Ingredients - Unlike manure-based, poultry-based and biosolid fertilizers; Non-manure based, 10-0-2 w/Pre-Emergent is made from plant proteins.

- No Manure = No Odor.
- No Biosolids.
- No Harsh Ingredients.

 No Synthetic Phosphorus Added- Complies with state and regional restrictions where phosphorus use is banned.

• 10-0-2 w/Pre-Emergent our combination of ingredients promotes lush, green turf.

• Can be applied during seeding, will not negatively impact seed germination.

• Competitive Pricing - 10-0-2 w/Pre-Emergent, is a cost-effective alternative to biosolid-based fertilizers, and is a non-commodity product. therefore the price won't fluctuate.

• Convenient: No Restrictions on Re-Entry Time After Application- With no harsh ingredients, there are no restrictions on re-entry time after application.

10-0-2 w/Pre-Emergent **Provides Turf Managers with** a Much-Needed Alternative

Widespread awareness has prompted parents, schools, municipalities and other organizations to increasingly seek fertilizer options that do not contain harsh ingredients 10-0-2 w/Pre-Emergent meets the growing demand for harsh, ingredient-free alternatives and provides turf managers with a proven, effective product that delivers results and features optimal ingredients:

• Sustainable - Rather than letting food waste wind up in landfills, we refine it and blend it into effective soil treatments.

 Patented Plant Protein Technology 10-0-2 w/Pre-Emergent is derived from corn processing food waste and is blended with processed corn gluten meal and boasts our patented plant protein technology.

 Contains Corn Gluten Meal and Food Grade Urea

1 Lb. N	v	x	P/Q	L*2	46-25'	7.75-25'

Application Programs

Cool Season (Northern) Grasses Fertilize northern grasses, such as Kentucky Bluegrass, Fescue and Perennial Ryegrass, 2-3 Aplications annually.				
Apply 2 weeks prior to crabgrass germination. Second reinforcement application should be made 5-6 weeks after initial treatment.	3-5 Lbs. per 1,000 sq. ft. Use 5 Lb rate on high pressure crabgrass sites			

Warm Season (Southern) Grasses				
Fertilize southern grasses, such as Bermuda, St. Augustine, Centipedegrass. Bahia and Zoysia, 3 times per year.				
Instructions	Time of Year			
Apply 2 weeks prior to crabgrass germination. Second reinforcement application should be made 5-6 weeks after initial treatment.	April (After turf breaks dormancy.) 3-5 Lbs. per 1,000 sq. ft. Early October (Overseeding)*			

*In regions where killing frosts occur. avoid nitrogen applications to warm-season grasses month prior to the average date of the first fall killing frost. For best results. fertilize when overseeding.
